BATHROOM WALL PANELS

BEAUTIFUL STYLES

The Perla concept is to transform the ordinary bathroom adding beautiful practicality and youthful exuberance without costing the earth.

Perla panels are now attracting market share from traditional tiles where the advantages of hygiene and practical installation as well as attractive new types of design make them a hit with customers.

Perla offers a wide variety of authentic stone designs and textures as well as stretching your imagination with high quality abstract and amazing decors which cannot be achieved with any other materials.

100% HYGIENIC

With a large format uniform melamine surface, our Perla panels are easy to keep spotless with a simple wipe of the surface. There are no grout lines harbouring germs and any grime can be simply whisked away using shower-shine products.

EASY TO INSTALL

Panels easily slot together using the bespoke range of attractive profiles or SmoothGroove click together joints. Panels can be installed over existing wall coverings with a massive saving in time, cost and disruption.

FAST TURNAROUND

Panels are large format, clean and easily installed with speed and cleanliness, with no wet adhesive or grout drying times. Sub-walls need no preparation such as plastering or skimming and the panels can simply be installed over plasterboard or stud.

OUTSTANDING DURABILITY

Real high pressure laminate wall panels offer features which will outlast other panelling materials with a durable, easy to clean melamine surface which will not crack, flex or deteriorate over time.

NO MAINTENANCE REQUIRED

Unlike ceramic tiles there is no need for any grouting and therefore no dirt traps to be bleached or dug out and regouted at regular intervals with resultant massive savings in time, mess and inconvenience - a real selling point.

10 YEAR WARRANTY

Perla Bathroom products offer the highest standards in quality, performance and are manufactured in the UK to exacting standards. We are pleased to offer an exclusive 10 year residential performance warranty on all Perla products.

DESIGNED FOR THE WAY
WE LIVE TODAY

A combination of innovative design with advanced manufacturing techniques gives Perla a unique character and supreme practicality. Perla Bathroom products meet the sustainability demands of the current climate without compromising on quality or performance.

PANEL ADVANTAGES

Perla wall panels feature a high pressure decorative laminate face and matching texture bonded to a solid core and backed with a balancing laminate.

We offer a selection of 39 decors available from stock in five formats all specially designed to perfectly meet the design requirements of any bathroom or shower area whether you are looking for a realistic stone type design or something more contemporary.

The range of complementary profiles in four finishes perfectly completes your installation with that professional touch.

PERLA FORMATS

- 2400mm x 1200mm Square Edged
- 2400mm x 900mm Square Edged
- 2400mm x 1200mm Interlocking Tongue & Groove
- 2400mm x 900mm Interlocking Tongue & Groove
- 2400mm x 600mm Interlocking Tongue & Groove

CARE & MAINTENANCE

There is virtually no maintenance of the panels required although it is advised to keep the seal at the base of a shower or around a bath clean and well maintained. Panels can be kept as new using a regular cleaning regime using standard shower shine products.

MATERIALS

Perla has high pressure laminate surface bonded to a moisture resistant MDF core and backed with a balancing backing laminate. 11mm thickness overall.

Panels are joined with a system of specialised profiles in chrome, satin, black or white finishes.

Our optional interlocking SmoothGroove tongue and groove system means that panels can be joined in a line without the use of profiles to create an appearance with less apparent joints.

QUALITY

Perla Panels are manufactured using the finest quality materials and profiled by highly trained machinists to ensure extremely tight manufacturing tolerances. Panels are thoroughly inspected throughout the manufacturing process and are quality checked and passed to be in the best possible condition when they leave the factory.

Perla Panels offer many advantages over other wall surfaces such as ceramic tiles or PVC cladding.

- Maintains its new appearance
- Easy to keep clean
- No grout to maintain
- Will not become brittle over time
- Will not crack like PVC
- Screw mounting of accessories
- Will not fade
- Clean & neat jointing systems
- Easy to cut, drill and fit
- Profiles to protect and conceal silicone

ELEMENT WHITE
High Gloss P26

Some trends are indisputable - the use of gloss white as a simple design statement for example: subtle tones offer timeless simplicity. Abstract stone designs in shabby chic are also in vogue and let's not forget the showbiz white and black glitter designs which are perfect in a spotlight-lit bathroom to bring out your inner star!

Want to make a statement with your bathroom – then you can be WOW'ed by Colour with this new gloss wall panel range from Perla. Celebrate the lush colours of Vogue and take control of your look because colour looks great in both traditional and contemporary spaces either as a bold focal point or as a surprising link to other bathroom elements.

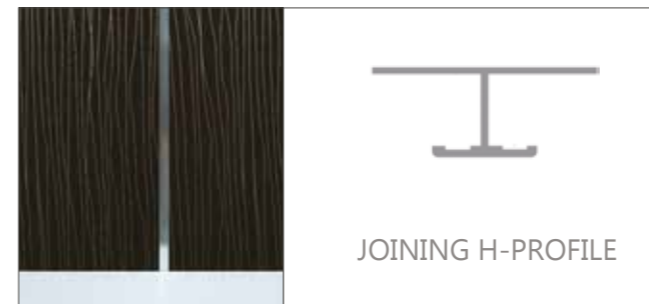

FINISHING PROFILES

PROFILES

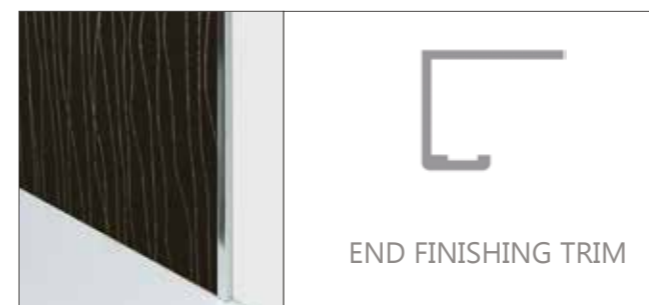

Square edged panels are joined using aluminium profiles. There are six types of profile and trim available; joining strips, internal corners, external corners, end finishing trims plus a trim designed to sit on top of a bath or shower tray edge to allow for easy cleaning and low maintenance. A further trim is available to insert against a bath or shower tray edge when the panels are installed as recommended down to floor level and the tray or bath sits against the panels.

A joining profile is designed to join panels in a line when a wall is required to be clad. The joint is as unobtrusive as possible leaving a slim strip of chrome, satin, white or black. Profiles are 2450mm in length to suit the panels.

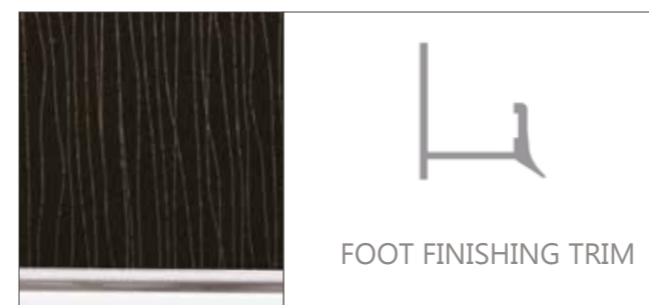

The internal corner profile is used to form a right angled internal corner. The profile has a unique slim shape to be as unobtrusive as possible. Profiles are 2450mm long and available in chrome, satin, white or black.

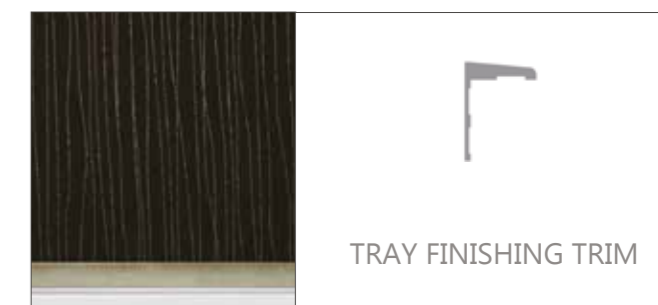

The end finishing profile is extremely useful in finishing off the edge of a panel or in the transition between a panel and adjoining ceramic tiles. With a slim square profile the trim is extremely attractive and available in the four finishes in 2450mm lengths.

The external corner profile is used to form a right angled external corner. The profile has a square profile to match the end finishing trim. All profiles are 2450mm in length and available in chrome, satin, white or black.

When a panel is required to sit on top of a shower tray or bath edge then the foot profile is the perfect way to finish the edge in a neat and easy to maintain fashion. Profiles are 2450mm in length and available in chrome, white or black.

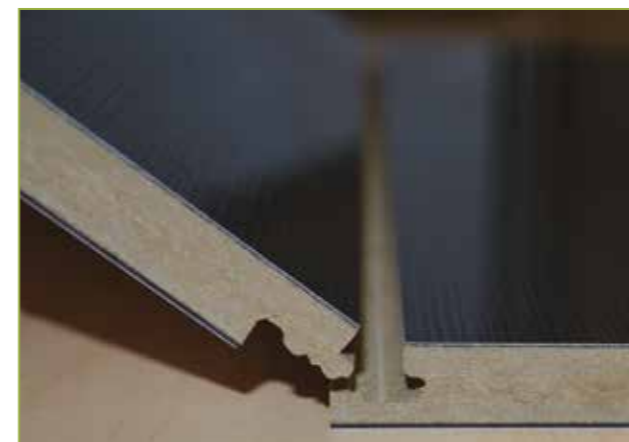

A slim elegant profile used when the panel is fitted behind the shower tray or bath edge as recommended. This trim finishes off the joint between the panel and the tray or bath concealing the silicone seal making the installation easy to clean and maintain. Profiles are 2450mm in length and available in chrome, white or black.

Panels must always be sealed with Perla Seal2Wall high performance sealant

SMOOTHGROOVE

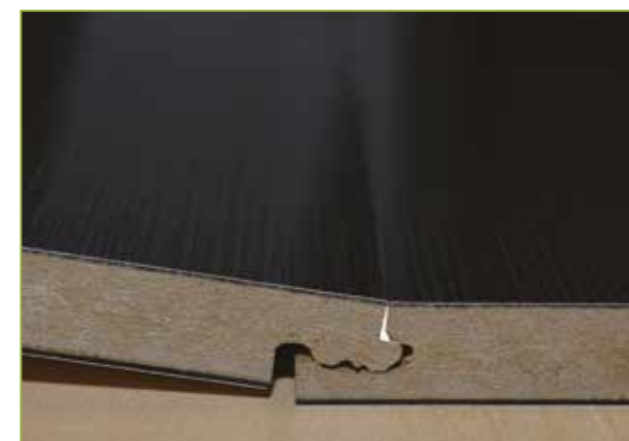

Often when panels are required to cover a larger area the profile-less joint of our interlocking tongue and groove becomes a required feature. Fitting tightly together without any joining strips means that the high quality Perla decors can be used continuously with only a slight line visible. Panels should be sealed using Perla Seal2Wall panel sealant to most sub-wall surfaces which are sound, dry and dust free.

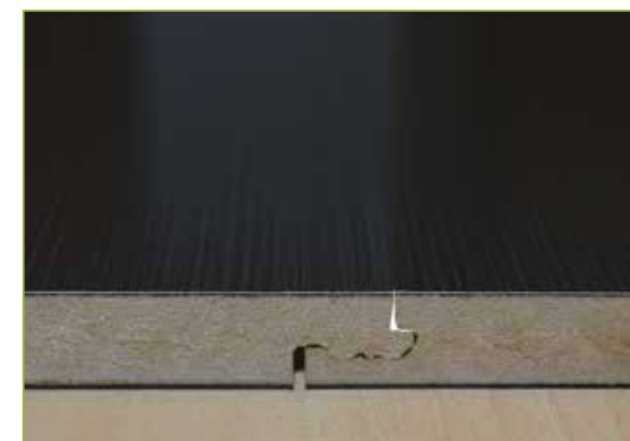

Interlocking panels should be fixed with the grooved edge exposed so that the tongue part can be introduced into the fixed panel. The interlocking tongue should be introduced at an angle of around 30 degrees so that the front edges of the two panels are touching.

The panels are glued to the wall using Seal2Wall sealant. The panels interlock on their long edge **and must be installed with a bead of sealant along the top of the tongue**. Make sure that there is enough sealant to ensure a water-tight seal of the precision engineered joint.

Insert the tongue of the next panel into the groove of the fixed panel. Then by pushing the panel backwards it should gently click into place and be held firmly with minimal gap between the two panel faces.

Ensure the tongue is tightly inserted and that there are no distortions caused by loose material or bowed panels before pushing the panel back into its final position. Clean off any excessive silicone before it dries and make a visual inspection to ensure that the joint is correctly aligned.
